

Digital Portfolio

My portfolio will have my name and an introduction introducing myself and will show my experience, skills, examples of work, a way to contact me and some information about me.

My experience will be about what I've done during the level 2 computing course and outside of college, for example, work or online courses I've taken so people looking at my portfolio can see what experience I have.

My skills will be about what I can do and what I'm good at so people looking at my portfolio can see what I can and can't do and my skill level.

The work page will show course work I've done for each unit and what marks I have achieved as well as my exam results.

The contact page will have information about contacting me like my email and phone number. It will also have my address so employers can know how far away I am from them. There will be links to all my social media so employers can either try contacting me there or just look through them to get more of an idea of what kind of person I am. On the contact page will be text boxes where they can put their information and leave me a message.

The about page will also contain some contact information like phone number and email but will also have information like my age. The about page will mostly be about things I like doing or have an interest in and what kind of job I would be looking for. It will also have some personal skills that I have.

Purpose of the Portfolio

The purpose of my portfolio will be to showcase myself, my skills, my experience, my work and accomplishments that I have learnt and done during my computer course and to catch the attention of employers. Making a digital portfolio will make it easy for people to access anywhere there is an internet connection. It will be a place where I can put everything I've done and things about me together so I can show people and they can see everything in one place.

Target Audience

The target audience will be for employer's/college teachers, 18+, as I am making this digital portfolio to showcase my course work and skills in IT. It will be mainly targeted towards employers in IT.

Planned Design

Theme: (The theme of my digital portfolio will be digital/tech)

Logo: (The first letter of my name)

Logo Colour: (Black) – (Green)

Navigation Bar Layout: (Home) – (Skills & Experience) – (Work) – (Contact) – (About)

Background Colour: (Black) – (green)

Text Colour: (White) – (grey)

Navigation bar colour: (Green) - Lights up on mouse hover

Font: (Open Sans – Google fonts)

Pages:

- **Homepage:** (Name – Introduction)
- **Skills & Experience** – (What I can do – what I'm good at) – (level 2 computing – talking about what I've done during the course)
- **Work – (Second navigation bar in work)**
 - **Unit 1:** Online world
 - **Unit 2:** Tech Systems
 - **Unit 3:** Digital Portfolio
 - **Unit 8:** Mobile App Development
 - **Unit 13:** Website Development
 - **Unit 14:** Installing and Maintaining Computer Hardware
 - **Unit 15:** Installing and Maintaining Computer Software
 - **Unit 17:** Multimedia products development
- **Contact** – (My email and social media)
- **About** – (Some information about me – what I've done in the course – what I like – like a cv)

Page Details

Name – (Chris Merrett)

Introduction – (I am a college student taking a level 2 computing course)

About me – (I am a college student located in Cheltenham. I am taking a computing course because I have a passion for programming and am looking to get a job in software development.)

Well-organised person, problem solver with high attention to detail. I like reading, TV series and listening to music.)

Skills and experience – (Since I started gaining an interest in programming, I've edited some files written in C++, taken some online courses, made a website using HTML, CSS and JavaScript and have gone to college for a computing course.)

Alternate Design

Logo: (My initials with word art in red and green)

Homepage: (Name – Introduction)

Homepage button position: (top left)

Navigation bar: (Experience) – (Skills) – (Work) – (Contact) – (About)

Colour

Background: (Blue)

Text: (White) – (Green)

Navigation bar: (White – green on mouse hover)

Fonts – (Open Sans - Roboto Slab – Monsterrat - Playfair Display - League Spartan - Titillium Web

LTC Bodoni 175 - Calluna - Futura PT - Freight Display Pro)

Font – (LaBelleAurore)

Justification

Chosen Design

My chosen design looks simple and neat with colours that are usually seen in coding so it matches a computer course. I chose not to use too many colours to make the website look neat and professional and fit the theme.

I combined the skills and experience pages into one page so it would fill up the page more and look less empty.

The design is simple to navigate so people can easily find what they are looking for and the colours I chose work well together to make the website look nice and make the text easy to read.

I chose a picture of a computer because my work will be about a computing course and it is relevant to the website instead of using a random image.

The photo of myself is so people can see what I look like. I chose the logo because it is the first letter of my name and the colours fit the theme.

The font, text size and text colour are consistent throughout the website to make it look clean and match well with the other colours and background.

Alternate Design

I discarded the alternate design as it does not look as neat and professional as my chosen design. The skills and experience pages look empty with lots of free space on the page and looks unfinished.

The background does not look as nice or professional and my chosen design more closely fits the theme for a computing portfolio and is better to look at.

The text colour did not work as well with the other colours and background compared to what I've chosen and do not fit as many different other colours and styles.

The logo's colours did not work well with the other colours and did not fit the theme.

The layout of the website looked too common and not as unique as my chosen design. The layout is not as neat or easy to navigate as my chosen design.
